TECHNOLOGICAL CHANGE  
AND THE FUTURE OF THE RAILWAYS . . . 239pp . . . \$4.00

What is the future of the nation's railways?

In an effort to reach a realistic appraisal of the question, some of the world's foremost authorities in industry, universities and government joined together at a conference sponsored by the Transportation Center, January 23-25, 1961.

The published proceedings of the conference -- containing 16 selected papers which attempt to resolve this challenging question and point the direction for a dynamic future -- are now available from the Transportation Center.

The papers - covering technological aspects of finance, labor, government regulation, engineering, administration, economics and sociology - isolate the important factors inhibiting the full use of railway technology and give concrete proposals for overcoming these factors in the future.
